Introduction

In this chapter, we will discuss briefly about how to set & use BoroBazar. The whole chapter is arranged in a order, so that following them step by step will help you to end the theme setup journeyn with a complete online shop.

Download The Theme

After purchasing BoroBazar theme and download the packages from the Envato. Unzip theme package and you will get a `borobazar.zip` file.

Recommended System Requirements

- PHP version 7.2 or higher
- MySQL version 5.6 or higher
- Recommended WordPress memory_limit is 256M
- Maximum file upload size should be 16MB or higher

Theme Installation Steps

1. Goto to **Appearance->Themes** in your WordPress admin dashboard.
2. Click **Add new** at the top of the page.
3. Click **Upload Theme**
4. Choose **borobazar.zip** and click **Install Now**.

Few common issues when installing the theme

- a. The “**Broken theme and/or stylesheets missing**” error is **most common when you install or activate a new theme**.

Solution: If you get an error saying that the stylesheet is missing, then you have uploaded the wrong zip folder. Please check that you are uploading the borobazar.zip. You have to unzip the package file that you download from Envato to find this.

- b. **Problems with uploading via WP admin panel due Upload limit.**

Solution: You may check your file upload limit on Your Media Uploader page in WordPress. Depending upon the web hosting company and the conditions of the service they provide it may vary. The most common is about 8 MB which is more or less enough. But uploading some media files like audio and video may become a problem with for example 2 MB upload limit.

We decided to share some tips about how to extend your maximum file upload size in WordPress

Through functions.php file:

You may add the below mentioned code in the functions.php file of your theme

```
@ini_set( 'upload_max_size' , '64M' );
@ini_set( 'post_max_size', '64M');
@ini_set( 'max_execution_time', '300' );
```

Through php.ini file:

If you cannot see the php.ini file in your directory create the new one with below mentioned code and upload it to your root folder on your web server.

If you can see the php.ini file then change parameters or add :

```
upload_max_filesize = 64M
post_max_size = 64M
max_execution_time = 300
```

In case that tip does not work with 64MB, try it with 10MB.

Through .htaccess method:

You may try modifying the existing .htaccess file in the root directory or creating a new one.

Add the following code in the existing or new `.htaccess` file:

```
php_value upload_max_filesize 64M
php_value post_max_size 64M
php_value max_execution_time 300
php_value max_input_time 300
```

If you still face any issues, please don't forget to contact with our support channel. [Ticksy](#)

Theme Installation

After installation of the theme, you will be redirected to the BoroBazar welcome page. Please go through these steps throughly.

Permalink Setup

This step is a very tiny but very very important step. Goto your admin Dashboard `Settings->Permalinks` and set the `Post Name` permalink structure. Though `Post name` is recommended, but you can chose any other permalink structure rather than `Plain`.

Theme Requirements

- Check the [Theme Requirements](#) page to check if all site configuration is green. It's recommended to make sure all the variables are kept in green icon.
- If any of the variables have red mark, you need to contact with your hosting provider to check the issues.
- All the listed plugins used inside theme have a status checklist. It's always recommended to install and activate the plugins.

example screenshot of a site settings checklist:

Configure Necessary Plugin Settings

After installing all the plugins you will be needed to configure a few plugin.

WooCommerce

We always support the native documentation of WooCommerce. So, please check the official documentation of [WooCommerce](#).

Google Map

If you want to show google map on your website or contact page, you have to configure `google map` plugin first.

In WordPress dashboard there will be a menu named `Google Map`.

Visit that page & give the map API key input & enabled all the necessary settings.

GridSter

After installation of GridSter plugin, activate it and it will display a minimal settings panel.

- You can add any custom body class for the GridSter block modification.
- Enable/disable Transient API for blocks. [**Recommended**]
- Set transient time option. [**Recommended**]
- Globally set the product see all link for each block's slider mode.

[Special Note] For more details plugin documentation, visit the Supported Plugins chapter in this documentation.

Import Demo Data

The last chapter of this guide will show you how to import demo data into your site. Before importing demo data, make sure you have completed all the steps in BoroBazar welcome page. If you have finished those, then all 3 checkboxes will be green.

Steps of importing

- Now either click on `Import Demo Data` button in the welcome page, or visit the `Demos` page in WordPress admin dashboard `BoroBazar` menu.
- In `Demos` page, all the available demo site is listed. you can import different demos based on your need. Also preview link is available. So that you can always check the demo site before importing.

After Demo Import [important]

- After importing demo data, there will be some links with BoroBazar demo URL. In this case, you can use any `Search & Replace plugin` to remove the BoroBazar demo URL and set your own site URL.
- In your site if there could be already existed WooCommerce Shop, My Account, Cart etc pages. After demo import new similar pages will be added to your site. You may need to remove the duplicate WooCommerce pages which are not needed and keep the right one.

On your site, you'll get all demo images as blurry images. the picture we used for demo purposes, we don't have permission to redistribute.

Set search page redirect link text for user.

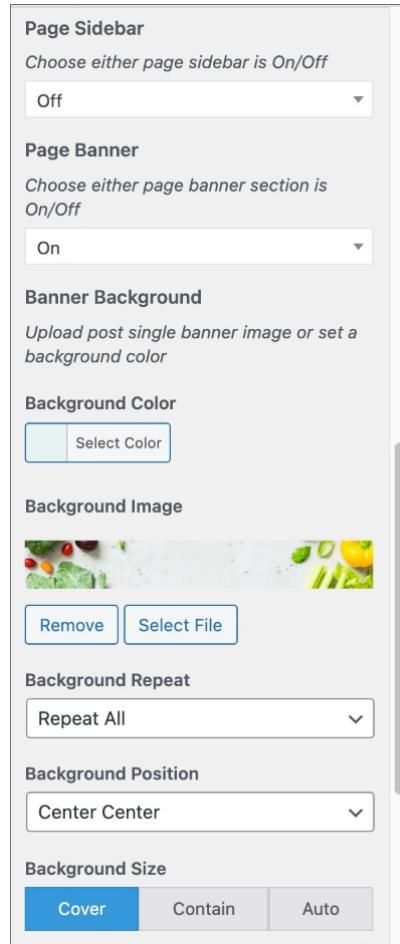

Explore search page.

How to enable page sidebar, banner and breadcrumb?

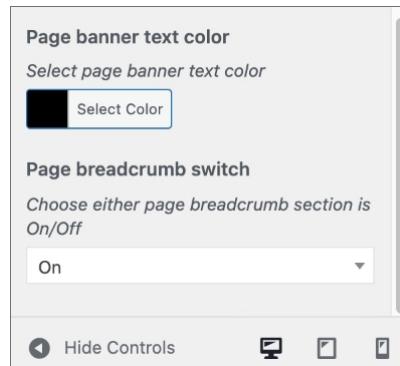

To enable and customize page sidebar [**page sidebar has two options for placement, left and right**], banner and breadcrumb go to:

Note: These options only for normal pages, For blog archive, blog post single, WooCoomercer Archive and WooCoomercer Porduct Single we have separated options

Customize -> BoroBazar Theme Panel -> General

below this section you will find page banner text color change option with breadcrumb enable/disable option

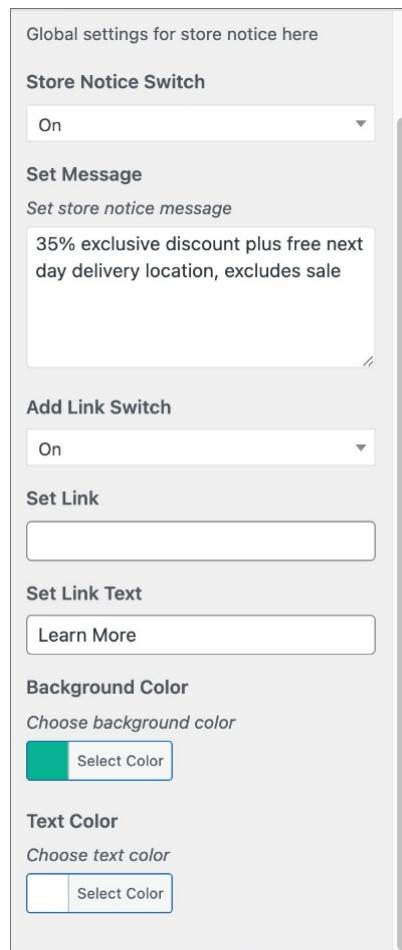

Store Notice

From store notice settings you can customize store notice message, add link, change store notice background and text color,
also you can enable/disable the notice bar. To go the settings panel -

Customizer -> BoroBazar Theme Panel -> Store Notice

Header Settings

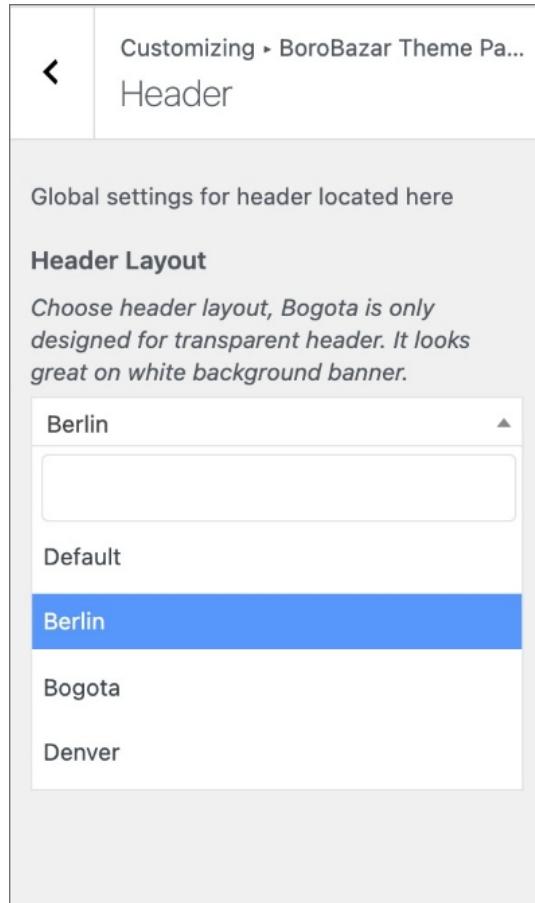

We provide 4 great header layout with app like mobile view. Here are those:

1. Default Header, we use in our vintage demo -> <https://borobazar.redq.io/vintage/>
2. Berlin Header which is our main demo header -> <https://borobazar.redq.io/>
3. Bogota is a transparent Header. we recommend to use it on a white background banner like ours -> <https://borobazar.redq.io/minimal/>
4. And last one is Denver Header, we use in our standard demo -> <https://borobazar.redq.io/standard/>

Ok, I got it. Now How do I able to change those layout?

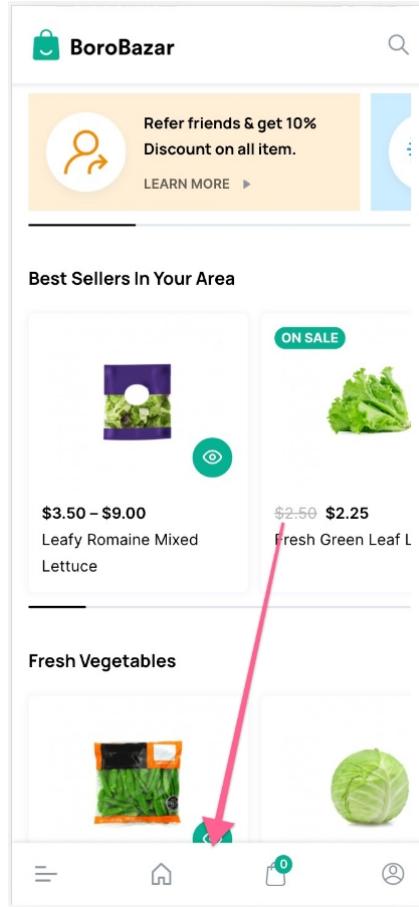

From our Header Settings you can change header layout. To go the settings panel -

Customizer -> BoroBazar Theme Panel -> Header

Mobile Bottom Navigation

On **BoroBazar**, we add a mobile navigation option that will render a mobile application like navigation when a customer visit from mobile.

To enable/disable this mobile navigation go to,

Customizer -> BoroBazar Theme Panel -> Mobile Bottom Navigation

From this customizer option, you can enable or disable the mobile nav, and also you can customize the navbar by changing the icon and background color.

The screenshot shows a settings panel for 'Mobile Bottom Navigation'. At the top, there is a back arrow icon and the text 'Customizing > BoroBazar Theme Pa...'. The main title is 'Mobile Bottom Navigation'. Below the title, there is a sub-section titled 'Global settings for Mobile Bottom Navigation'. Under this, there is a section for 'Bottom Navigation' with the sub-instruction 'Choose either bottom navigation is On/Off'. A dropdown menu is open, showing 'On' as the selected option. Below this, there is a section for 'Background Color' with the sub-instruction 'Choose background color'. A color selection button is shown, with the text 'Select Color' next to it. Finally, there is a section for 'Icon Color' with the sub-instruction 'Choose icon color'. A color selection button is shown, with the text 'Select Color' next to it.

Blog General

From Blog General Settings, you can enable or disable blog sidebar, blog banner, blog banner text color and breadcrumb. This settings panel only for blog index & archive pages.

Footer Settings

Footer settings consists of two part one is Footer Widgets and another Copyright Section. From Footer Settings, you can enable or disable footer widgets section, able to customize Copyright content and colors.

How can I use Footer Widgets in my site?

Well, To set footer widgets, you need to go to ->

Customizer -> BoroBazar Theme Panel -> Footer -> Footer Widgets

Global settings for footer located here

Footer Widgets 1

Choose either On/Off

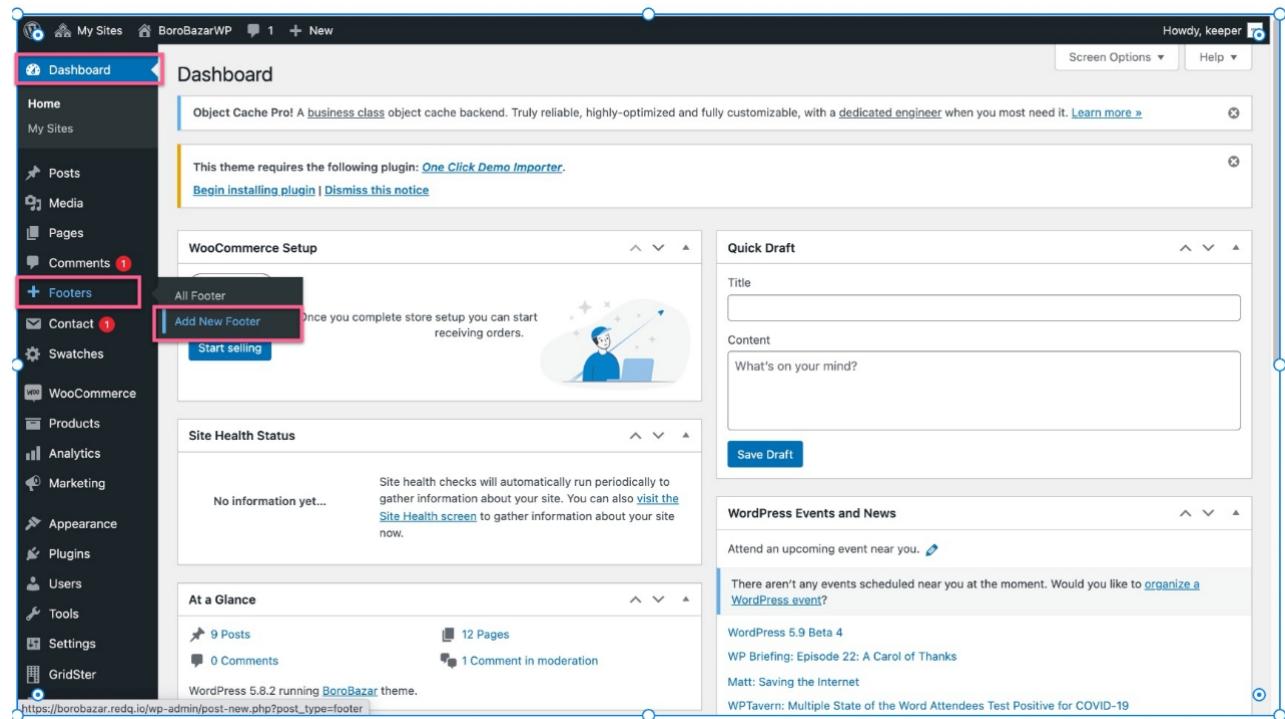

On

Custom 2

Build your custom widgets layout footer
from wp-admin->footer->add new footer

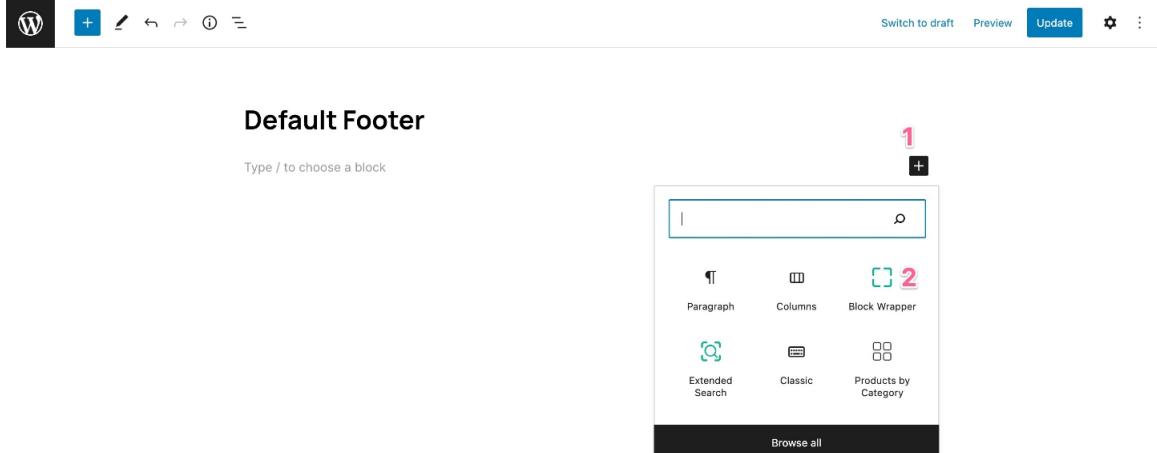

Select Footer

Choose Footer Widgets "On" and then go to

Create a footer page and after that follow below steps:

1. Add block wrapper block

2. Add column on wrapper block

Custom Footer Layout

3.

Document → Paragraph

4. after that, choose a column layout

Custom Footer Layout

4.

Document → Block Wrapper → Columns

5. You may need more than 3 column layout if you do then follow this step else go to step->5.

1

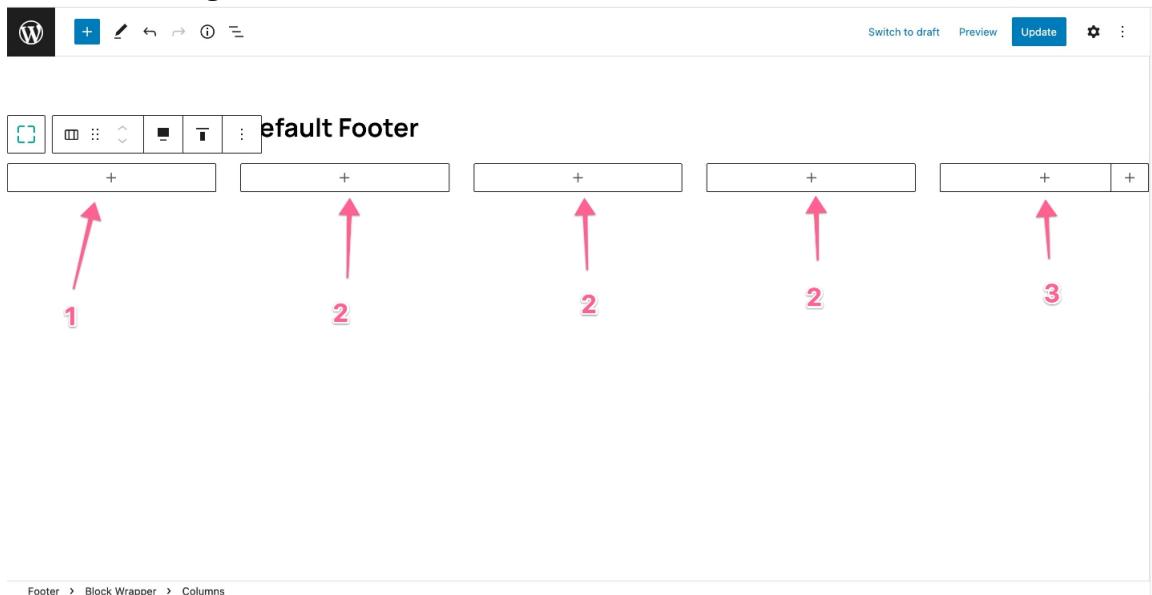

2

3

4

Footer → Block Wrapper → Columns

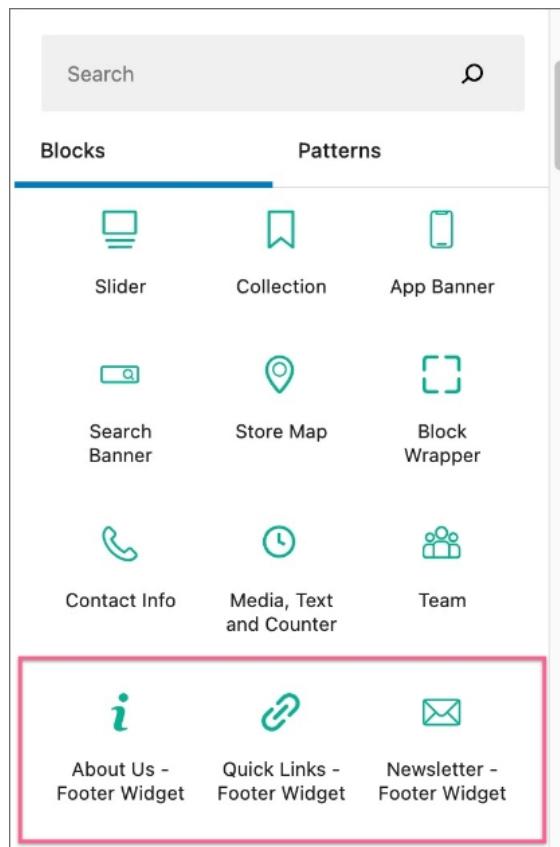

6. Add Gutenberg block on that column.

Right now, these block designs support footer layout. More design blocks will be supported in the upcoming version.

Supported Blocks

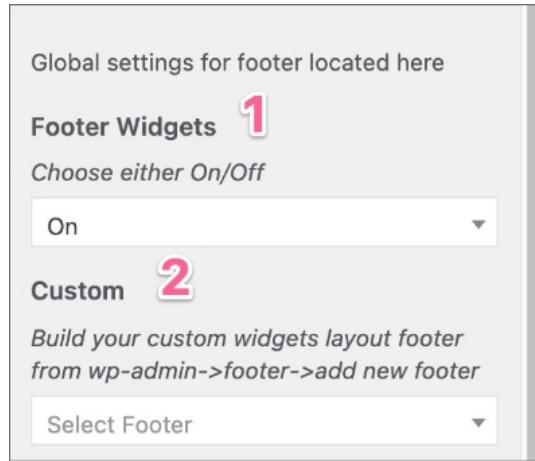

1. About Us
2. Quick Link
3. Newsletter

After creating the custom footer widgets layout go to,

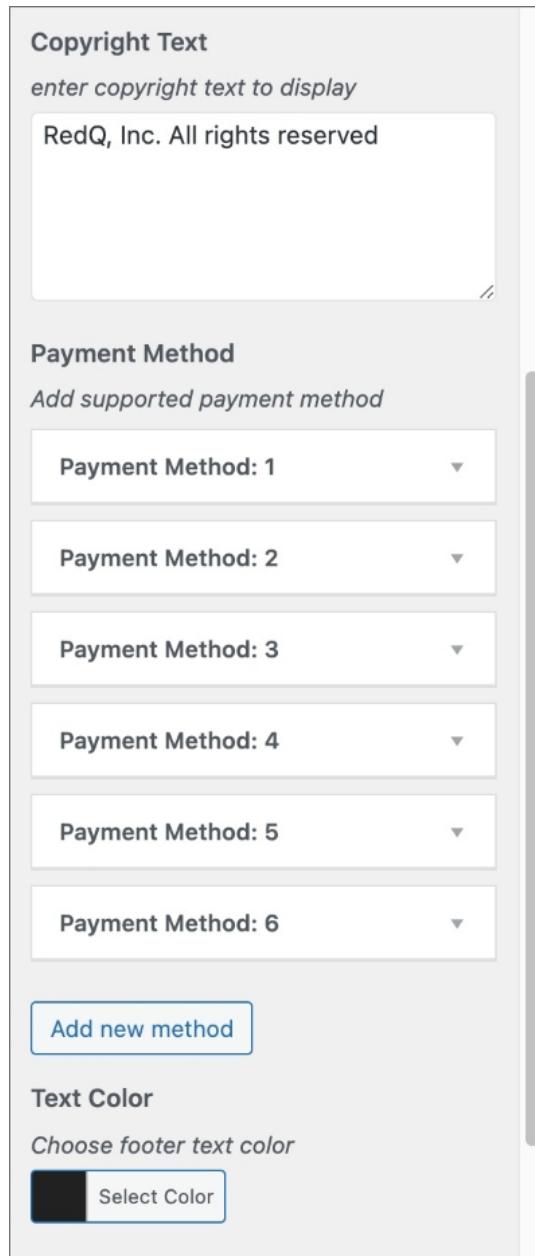

Customizer -> BoroBazar Theme Panel -> Footer -> Footer Layout

And select your custom footer layout in this screenshot which is 2

How do I customize copyright section?

After the footer custom layout section, you will find below panels for copyright-

WPMU Support

Note: We have another hidden panel for copyright section which is WPMU language switcher. It will appear when you install and activate WPMU plugin in your site.

BoroBazar Navigation

In this chapter we will discuss about the BoroBazar menu creation and checking the menu in front-end.

Create Menu

To Create at first, go to `Appearance->Menus` and from that menu section and create your menu. Before saving the menu, make sure you clicked `BoroBazar Main Menu` for that menu.

Tasks to remember

After importing demo contents please follow up this steps must.

- Go to `Appearance->Menus` page in WordPress dashboard.
- Check all the menu links. As some of the menu items are created with `Custom Link`, you need to remove the BoroBazar demo site URL & set your site's URL.

Search Functionality

In this chapter we will discuss how to implement search functionality in BoroBazar theme. Discussed topics include:

- Search page build
 - Extensive search build

- Quick search build
- Global search functionality

Search page build

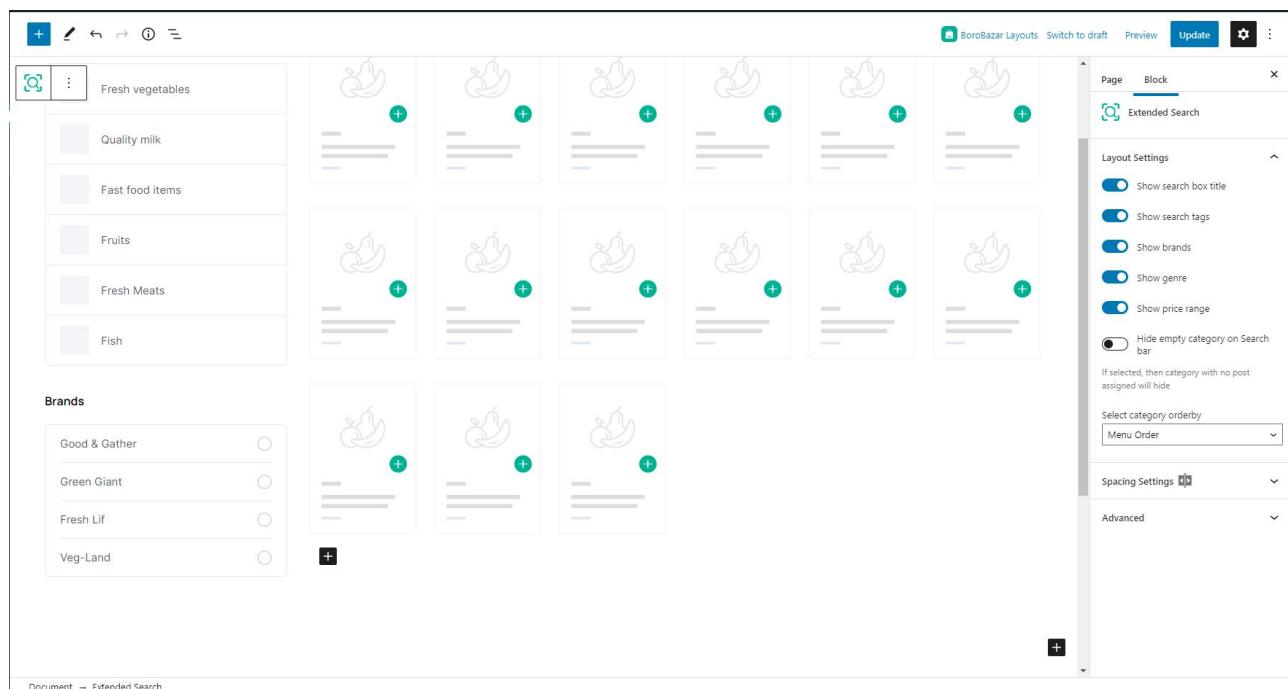

There are two type of search options available in BoroBazar theme. Extensive search page & Quick search page. Extensive search page is solely a page with multiple search and filter options.

Quick search is offered a search facility inside page along with many other Gutenberg blocks.

Extensive search build

Please follow up this steps to build extensive search page.

- Create a page with Full Width template. [**Recommended**]
- Add extensive search block to the page.
- Set the page spacing settings as much needed.

Quick search build

Quick search block generally helps user to search any product inside a page without redirecting to any other page. Please follow up this steps to build quick search functionality.

- Add this **Quick search** block inside a page.

- Set the page spacing settings as much needed.

Global search functionality

BoroBazar theme has a option to set global search functionality which is available in all pages. Please follow up this link to set global search functionality.

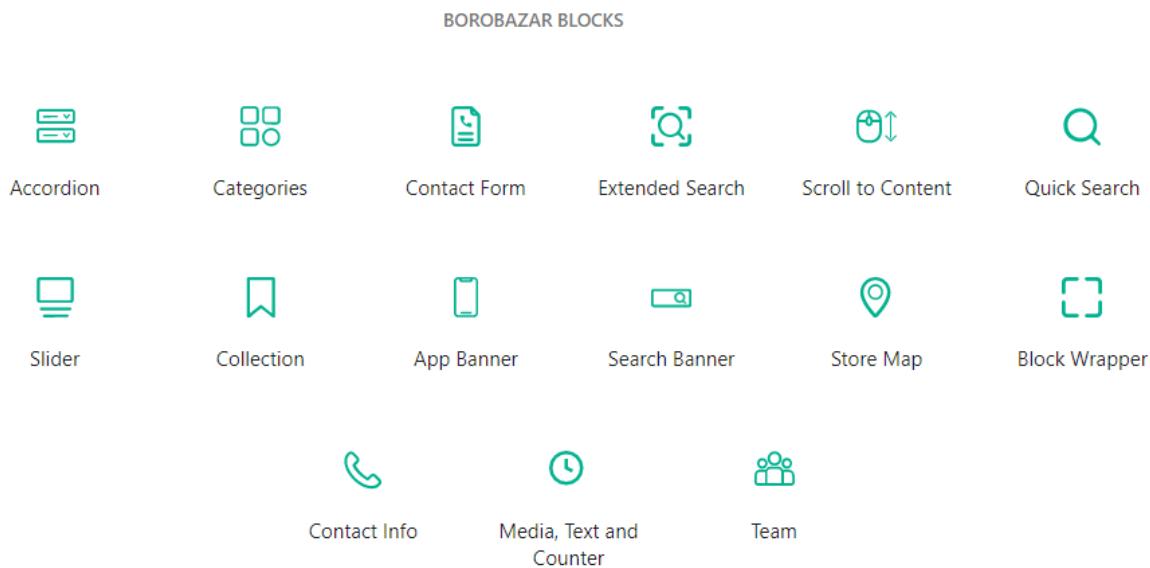

- Visit **Customizer settings > general-setting > how-to-use-header-globalautocomplete-search**

BoroBazar Blocks

Description

To make your website building easier and faster we've created a set of blocks for Gutenberg. Every demo is created with our Gutenberg blocks. So you don't need to install any third-party builder/library. Our block library contains 15+ blocks that are continuously updating. The ready-made page layouts are one of the features which lets you create a webpage in a click.

With BoroBazar Blocks we took the hassle out of the website building process. It gives you many unique and highly customizable blocks for Gutenberg that help you build and design pages or posts without a single line of code.

List of blocks

- [Accordion](#)
- [Categories](#)
- [Contact Form](#)
- [Extended Search](#)
- [Quick Search](#)
- [Search Result](#)

- [Media Text & Counter](#)
- [Team](#)

Common Settings

Settings which you will see throughout out every block.

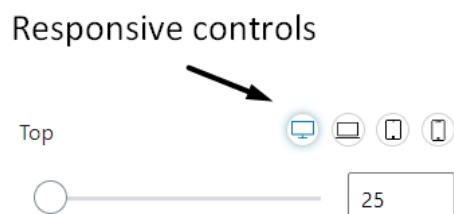

Spacing settings

You can easily add spacings for each screen size to your blocks.

Responsive Controls

With responsive controls you can tweak the block's settings for different screen sizes.

Device definitions in terms of min-width

Mobile : below 640px

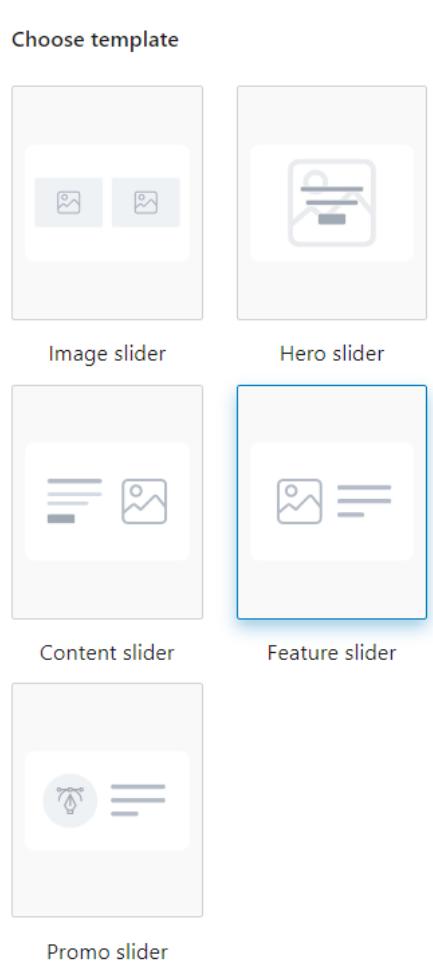

Tablet : 640px

Laptop : 1024px

Desktop : 1440px

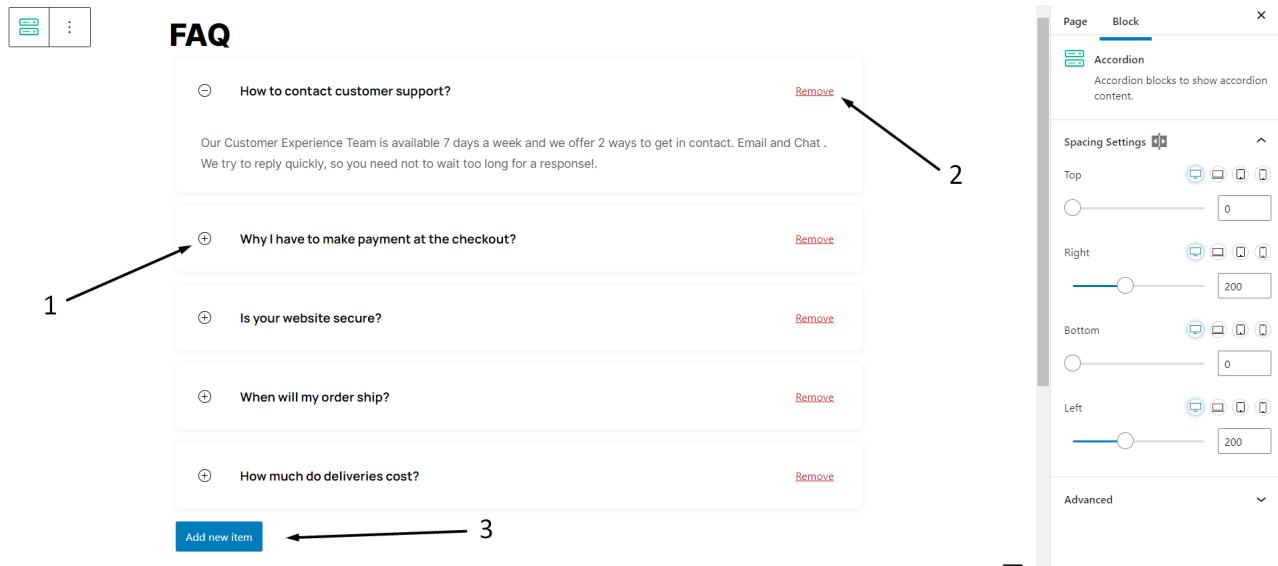

Template settings

Templates are predefine layouts for the blocks. Each template can consist of different content, layout, and style and can be customized with different settings. Below is an example screenshot.

Accordion

Create vertically stacked list of titles that can be clicked to reveal or hide content, Great for FAQs.

The screenshot shows the BoroBazar editor interface. On the left, there's a content area with a title 'FAQ' and an 'Accordion' block containing four items. Each item has a plus sign icon to reveal content, a title, and a 'Remove' button. Item 1 is the first item. Item 2 is the 'Remove' button for the second item. Item 3 is the 'Add new item' button at the bottom. On the right, there's a sidebar titled 'Accordion' with a description: 'Accordion blocks to show accordion content.' It includes 'Spacing Settings' with options for Top, Right, Bottom, and Left, each with a slider and preview icons. There's also an 'Advanced' section.

1. Click here to reveal or hide the content.
2. Remove the item.
3. Add a new item.

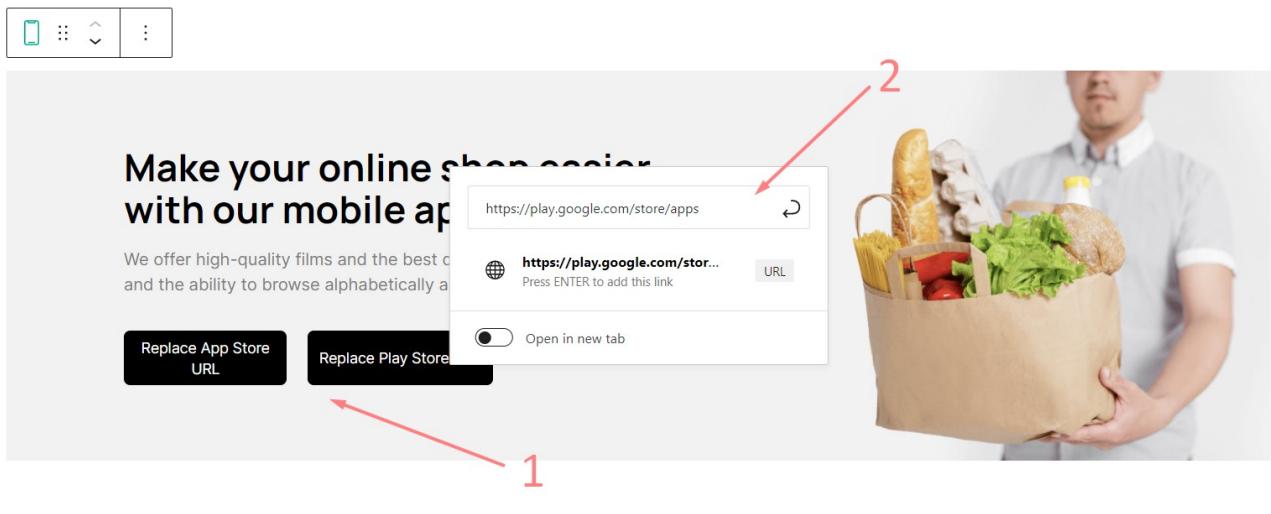

Settings

- Visit BoroBazar block common settings.

Collection is a static block that can be used to display a collection of posts, products, or anything you want.

- 1. Item options bar:** The item options bar is a list of options that can be applied to the collection items. For example, you can add/change the image, change image position, add a link, change the font color.
- 2. Block settings:** You can change the layout of the collection and add spacing to the block from here.
- 3. Add new item:** You can add new items to the collection by clicking the "Add new item" button.

Settings

- Template:** You can choose the template of the collection.
- Spacing Settings:** Visit BoroBazar block common settings.

Contact Info Section

This section is consist of 3 main blocks with built in Gutenberg columns block -

- Block Wrapper**
- Contact Info**
- Contact Form**

Support is our main priority

We created reusable react components, and modern mono repo so you can build multiple apps with common components.

Office Location
 2756 Quiet Valley Lane, Reseda, California, United States

Contact Info Section editor view and settings

Block Wrapper

As you can see in the gif file. First we use **Block Wrapper** block as a Section Wrapper for adding padding and margin, Also we have background color, shadow & border radius options if you need.

After that we add built in **Columns** block and choose two column layout in the first column we add our **Contact Info** block and for the second one we add our **Contact Form** Block-

Contact Info

From our contact info block, you can add block title, description and contact info list with icon/image like our Office Location, Call us anytime and Send Mail list.

Contact Form

Our contact form block basically use contact form 7. In order to use this block first you have to create a form from **Contact Form 7** plugin.

Install & active contact form 7 plugin then go to -

Dashboard -> Contact -> Add New

Contact form 1 1

Copy this shortcode and paste it into your post, page, or text widget content:

```
[contact-form-7 id="19" title="Contact form 1"]
```

Status

3 Duplicate Save Delete

Do you need help?

Here are some available options to help solve your problems.

1. [FAQ and docs](#)
2. [Support forums](#)
3. [Professional services](#)

Form

You can edit the form template here. For details, see [Editing form template](#).

[text](#) [email](#) [URL](#) [tel](#) [number](#) [date](#) [text area](#) [drop-down menu](#) [checkboxes](#) [radio buttons](#) [acceptance](#) [quiz](#) [file](#)

[submit](#)

```
<div class="theme-contact-form">
<label> Full Name
  [text* your-name] </label>

<label> Email Address
  [email* your-email] </label>

<label> Phone (optional)
  [tel tel-512] </label>

<label> Subject
  [text* your-subject] </label>

<label> Message
  [textare*a your-message] </label>

  [submit "Submit"]

</div>
```

Enter a form name like **Contact Form 1** then in the form editor paste the below code if you want to have same design like our demo. Specially the **.theme-contact-form** class wrapper -

```
<div class="theme-contact-form">

<label> Full Name
  [text* your-name] </label>

<label> Email Address
  [email* your-email] </label>
```

```

<label> Phone (optional)
[tel tel-512] </label>

<label> Subject
[textarea* your-subject] </label>

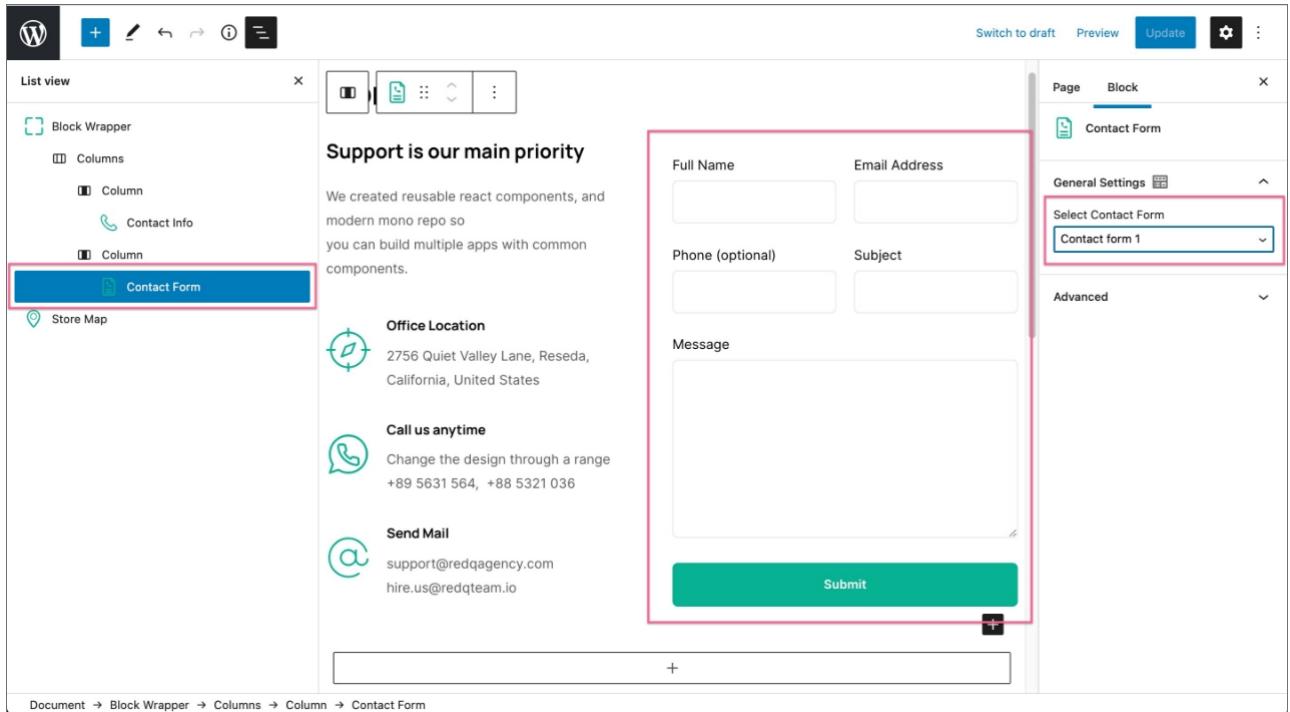

<label> Message
[textarea* your-message] </label>

[submit "Submit"]

</div>

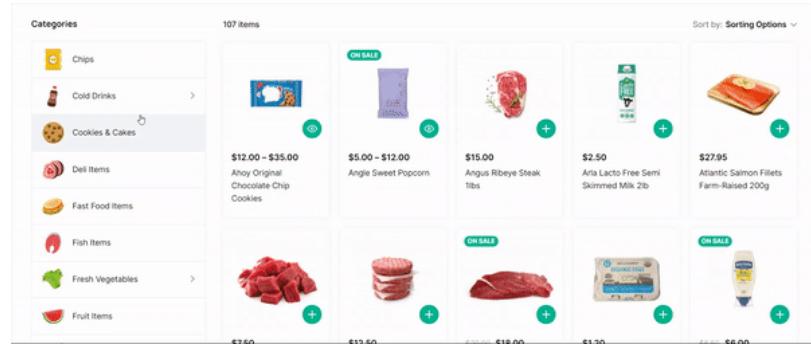

```

After creating the contact form from contact form 7 plugin. Now you'll be able to select that form. from our **Contact Form** block -

Media Text & Counter

This is a powerful and highly customizable block to show content and image/counter side-by-side.

Usage

After adding the block to the editor, you can either choose the image or counter alongside the content.

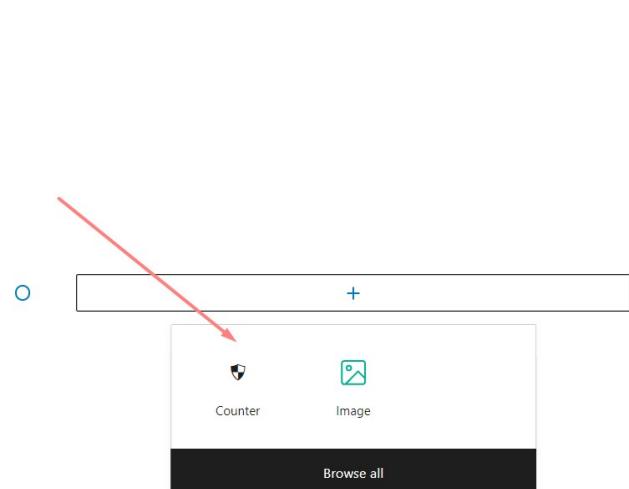

— Who we are

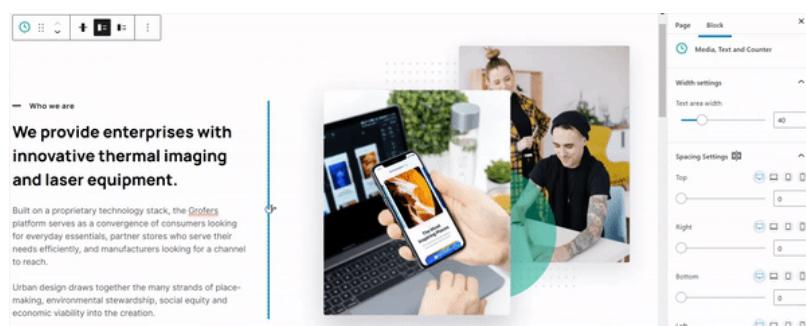

We provide enterprises with innovative thermal imaging and laser equipment.

Built on a proprietary technology stack, the Grofers platform serves as a convergence of consumers looking for everyday essentials, partner stores who serve their needs efficiently, and manufacturers looking for a channel to reach.

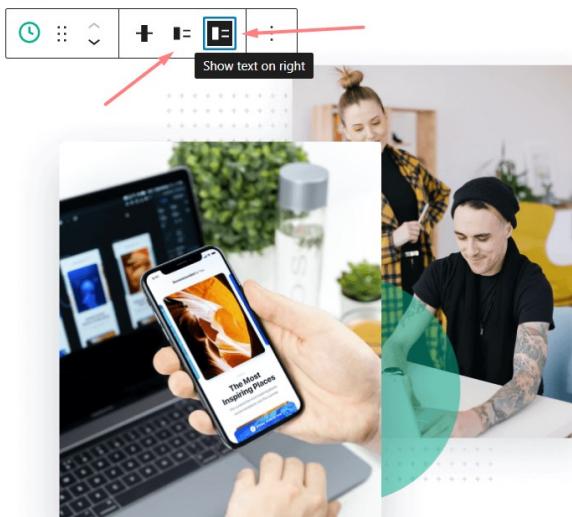

Urban design draws together the many strands of place-making, environmental stewardship, social equity and economic viability into the creation.

After adding your preferred elements, you can adjust the width by dragging the divider in between or from the sidebar.

Also, you can rotate the position of the content from the toolbar.

The screenshot shows a toolbar with several icons: a clock, a grid, a double arrow, a plus sign, a minus sign, and a text icon. A red arrow points to the text icon, with a callout box labeled 'Show text on right'.

Advanced

Note: If you click the title you can see the associated content.

Settings

- **Spacing Settings:** Visit BoroBazar block common settings.

Search Banner

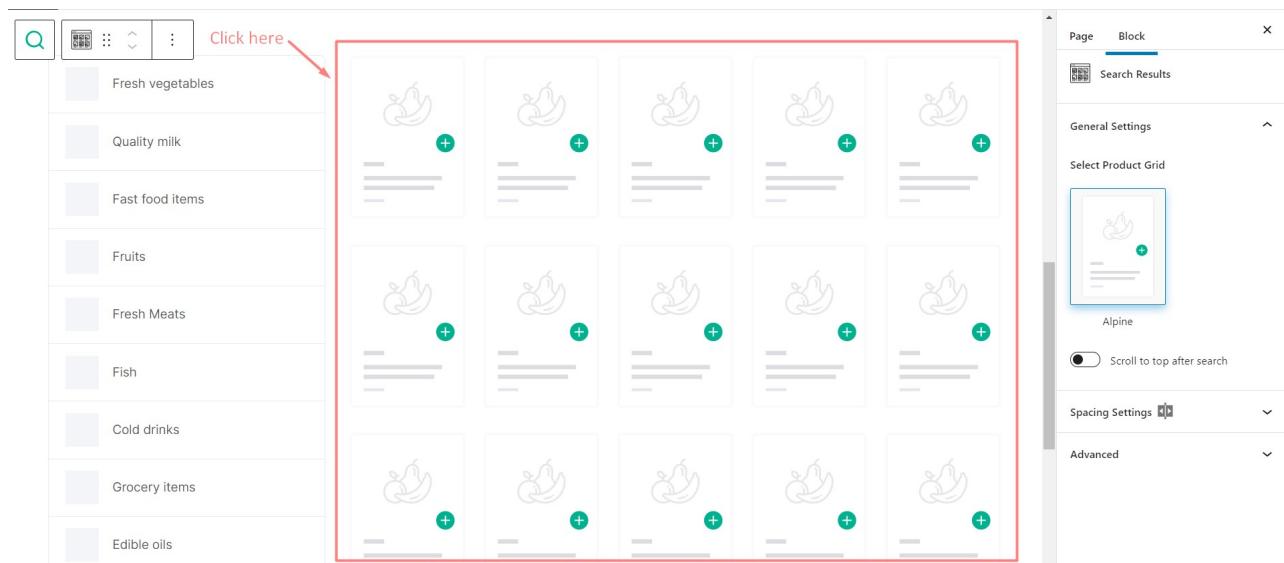

With search banner you can easily add a hero search form to your website. This search form will be redirected to the search page of your website.

Settings

- **Background type:** You can either choose a single image or slider for the background. If you want solid color then don't upload a image.
- **Minimum height:** Set the minimum height of the block.
- **Overlay:** You can add an overlay to your background image.
- **Color settings:** You can add/change background color, title, and description color.
- **Spacing Settings:** Visit BoroBazar block common settings.

Search Result

The search result is the child of the Extended search and Quick search block. The idea is to give you more flexibility with the product grid styles and layout.

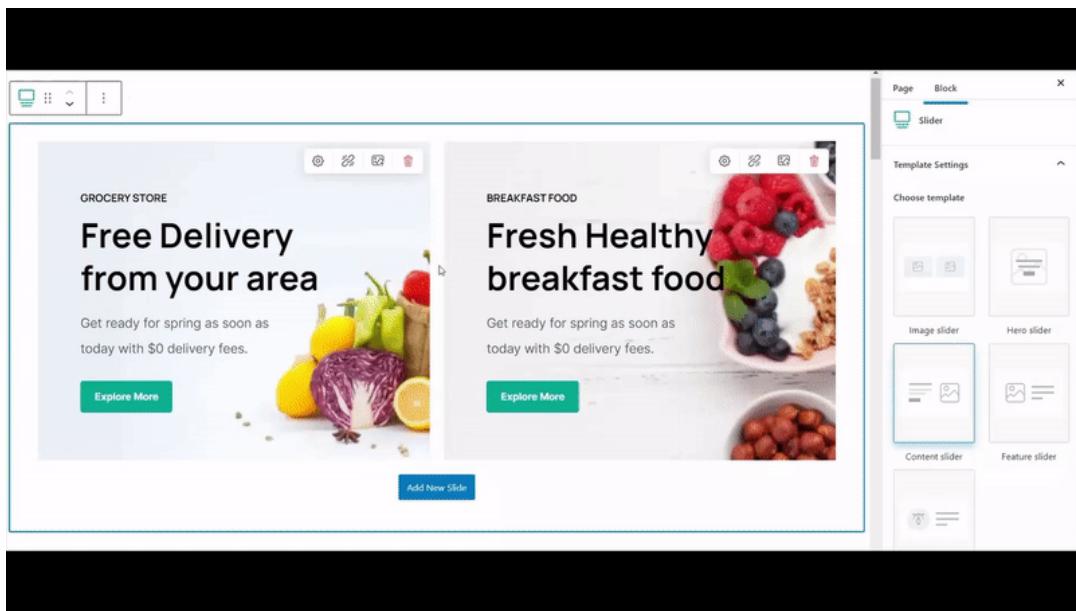

Settings

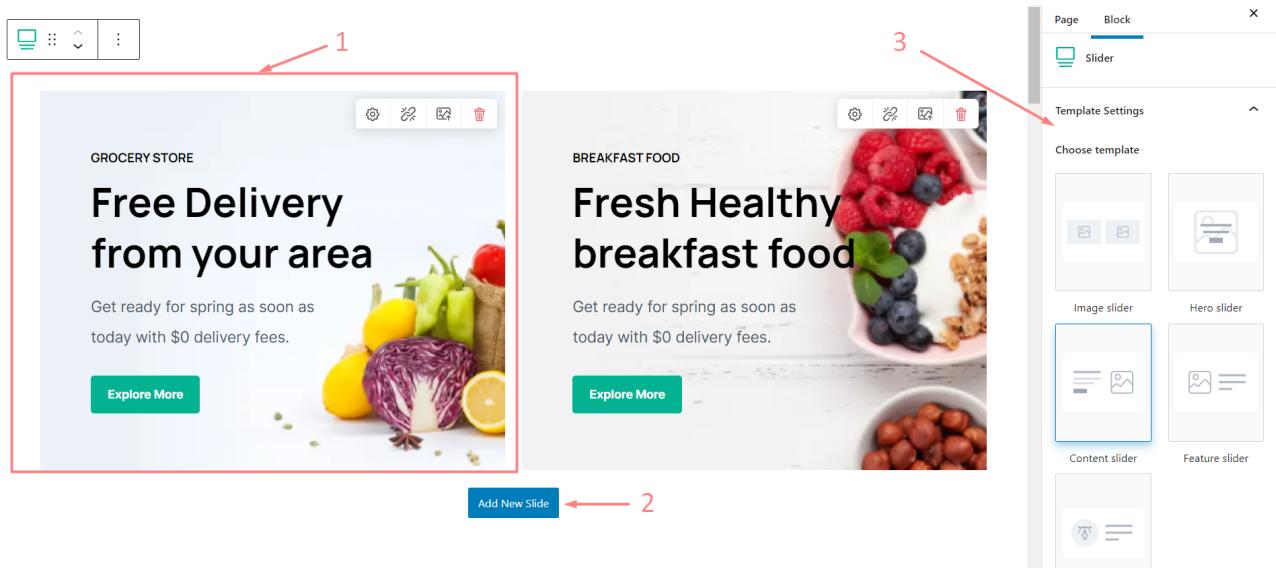

- **Template:** Select the product grid style you want to use for the search result.
- **Scroll to top:** If enabled widow will scroll to the top of the block when search triggers.
- **Spacing Settings:** Visit BoroBazar block common settings.

Slider

This is probably the most powerful and feature-rich slider which allows you to build your sliders within the Gutenberg editor. You can easily build your slider by just adding this block anywhere on the page or post. We provide a variety of templates to serve different use cases so you don't have to build your slider from scratch.

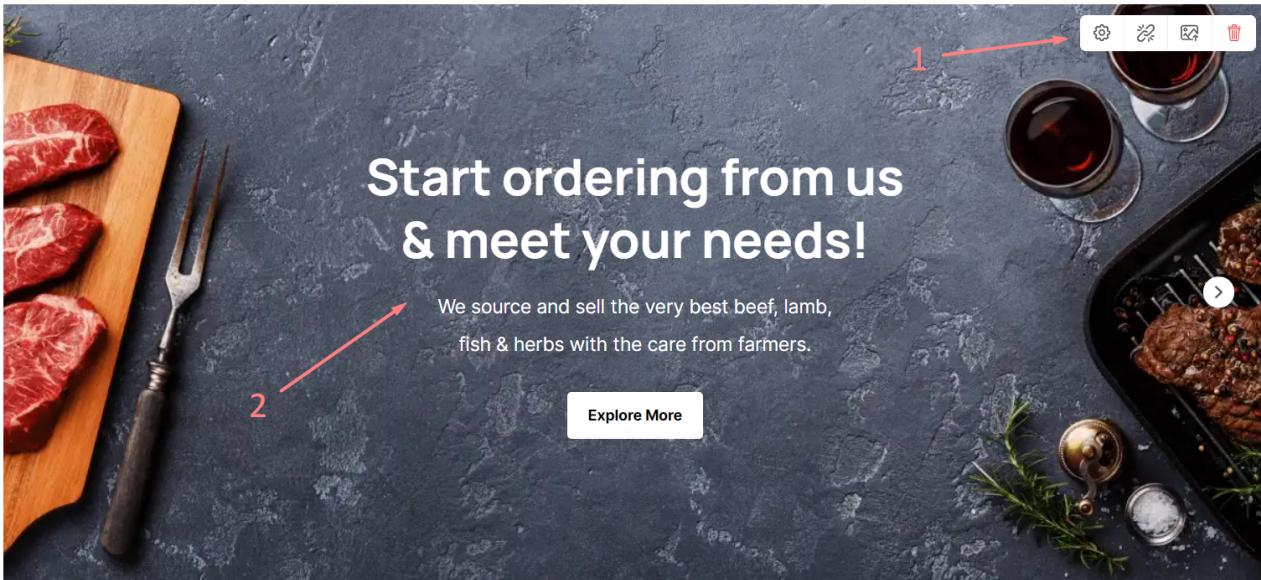

Slider skeleton

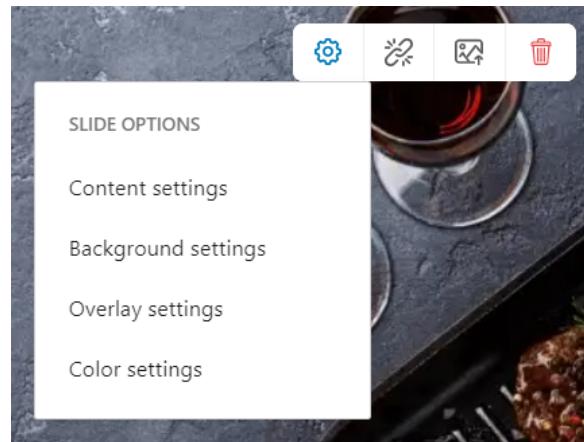

- 1. Slide item:** Each slide item has its content and options which can be customized differently.
- 2. Add new slide:** You can add new slide item by clicking on the `Add new slide` button.
- 3. Slider settings sidebar:** You can change the slider settings by clicking on the `slider settings` button.

Slide item

1. Slide settings bar: Slide settings bar contains:

- **Slide Options:** With slide options you can customized your slide height, padding, background color, font color, image position, etc.

- **Link:** You can add or edit the link of your slide.
- **Image:** You can add or change the image of your slide.
- **Remove:** By clicking the Remove icon you can remove the slide item.

2. Content: Content of the slide can be any of the following:

- Image
- Slogan
- Title
- Description
- Button

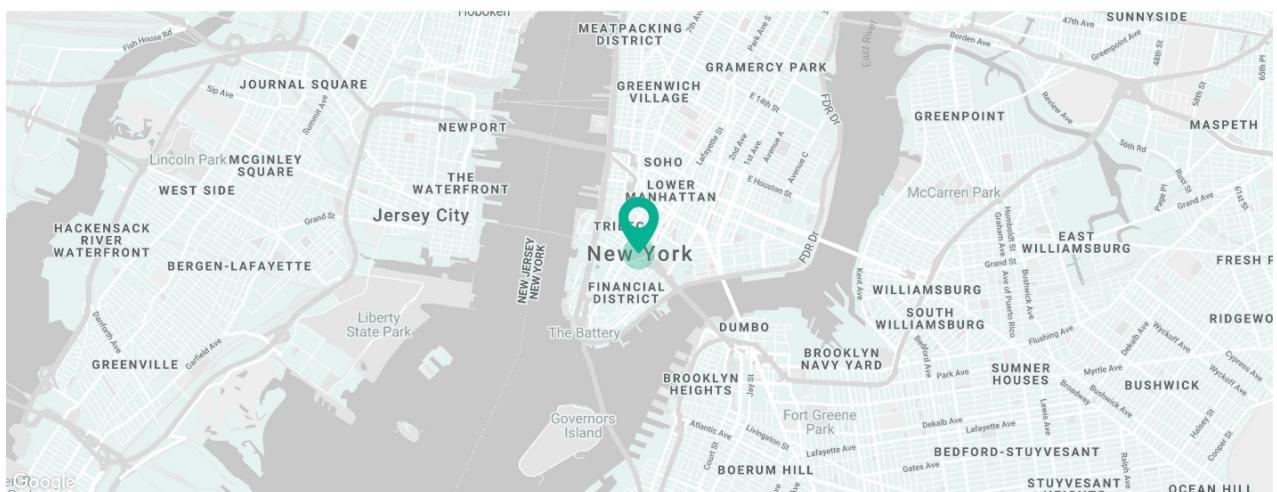

Settings

- **Template:** Select the layout you want to use for the slider.
- **Slider Settings:**

- **Distance between slides:** You can change the distance between slides for for different screen sizes.
- **Slider speed:** Duration of transition between slides (in ms).
- **Autoplay:** You can enable or disable the autoplay for the slider.
- **Loop:** Enable or disable continuous loop mode.
- **Centered slides:** If enabled, then the active slide will be centered, not always on the left side.
- **Grab cursor:** If enabled, user will see the "grab" cursor when hover on Swiper
- **Spacing Settings:** Visit BoroBazar block common settings.

Store Map Block

This block mainly design for **highlighting** your shop location in the google map.

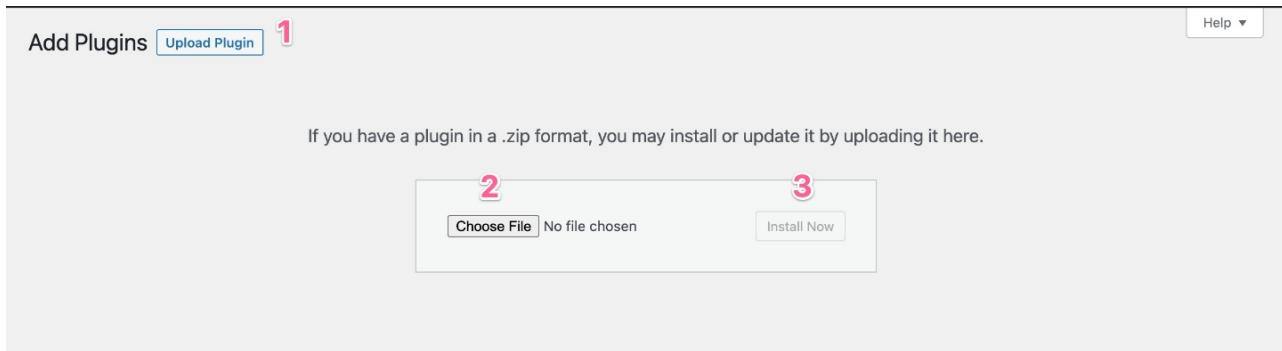

How do I use this block?

1. To use this block in your site first you need to install and active our open source **Load google map** plugin. Here is plugin link -> <https://github.com/RedQ/google-map>, download the zip file.

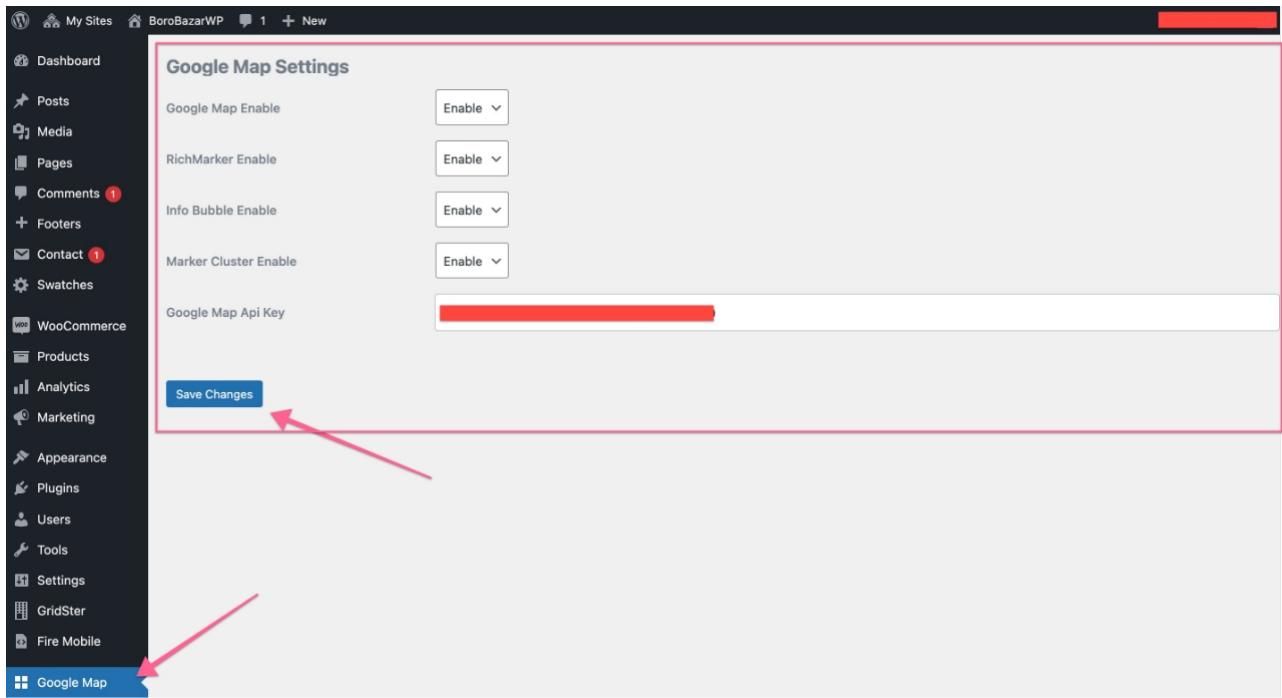

After downloading our plugin go to -

Dashboard -> Plugins -> Add new

2. Now you will see the **Upload Plugin** button beside the **Add Plugins** title click on that after Choose our google map zip file then click on **Install Now** button:

3. After installing and activated our plugin you will notice a new menu in a Admin Dashboard Sidebar called **Google Map**, click on that menu link and **you must fillup google map settings credential** then hit Save Changes button -

4. All settings are done, now your are ready to use our Store Map gutenberg block. We provide some necessary customization options in our block settings. You can add your own store address & marker image, able to enable/disable marker animation, set block height for each device etc -

Team Block

You can add one or many team member in your site by using our Team Block. Team block takes team member profile picture, name & designation -

Alex Callan
CEO, Founder

Dorian Price
COO, Founder

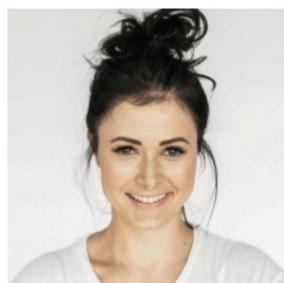

Matthew kade
CFO, Accounts

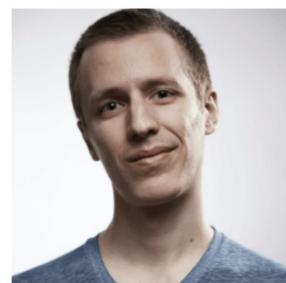

Hillary Wade
Head of IT

Classifications

We have a quick setup facility of those blocks to create either a complete page or a section of a page. It helps user a lot to jump start their website. We have divided that facility into 2 parts. Just choose them inside a page and it will auto setup a page area with demo content.

- **Sections.** Sections are the compact single component of a page.
- **Pages.** The whole page.

Compatible Plugin List

BoroBazar is built on proper WordPress and WooCommerce coding standards, and for that, all the third-party plugins related to WooCommerce should be working fine by default.

However, for some of the third-party plugins [**not listed here**] may need custom CSS support for making full compatibility.

We have tested some popular plugins and provided custom design and support for that plugin. You'll get the full list here:

Required

- BoroBazar theme helper [by RedQ]
- Google map loader [by RedQ] (<https://github.com/RedQ/googlemap>)
- GridSter [by RedQ]
- WooCommerce (<https://wordpress.org/plugins/woocommerce/>)
- Kirki Customizer Framework (<https://wordpress.org/plugins/kirki/>)
- Contact Form 7 (<https://wordpress.org/plugins/contact-form-7/>)
- WP SVG images (<https://wordpress.org/plugins/wp-svg-images/>)
- One click demo importer (<https://wordpress.org/plugins/one-click-demo-import/>)

Recommended

- Firemobile - Firebase mobile authentication [by RedQ]
- RedQ WooCommerce Quick view [by RedQ]
- GDPR Cookie Notice (<https://wordpress.org/plugins/cookie-notice/>)
- WPML Translation (<https://wpml.org/>)
- Variation Swatches for WooCommerce (<https://wordpress.org/plugins/woo-variation-swatches/>)

GridSter

GridSter is a Gutenberg supported plugin which is based on WooCommerce. The purpose of this plugin is to provide product-grid layout which can be used through out the site for different types of data display. Multiple grid layouts will be supported in future updates.

To install GridSter follow this procedure. Either

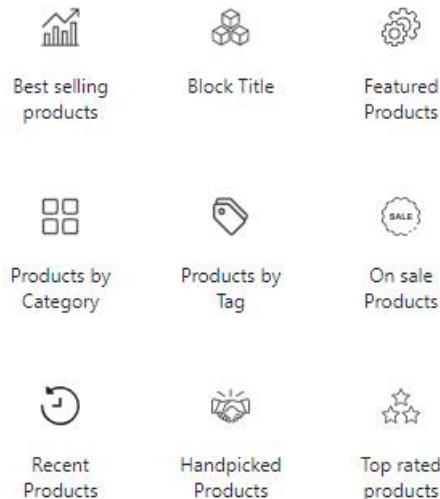

```
wp-admin dashboard -> BoroBazar -> Plugins
```

or

```
wp-admin dashboard -> Appearance -> BoroBazar Required Plugins
```

- `gs_grid_loop_empty` This action hook rendered a markup if there is no data/product available.
- `gs_grid_loop_items_after_wrap` his action hook is located just after the loop closing of displaying product girds.

Template Override Facilities

Template override is very important feature for further customizations. GridSter plugin provides template overriding ability. User/Developer needs to create a folder named as `gridster` inside his/her theme main folder. Then copy the inner folder and templates from GridSter plugin's `templates` folder & paste it inside theme's created `gridster` which s/he wants to override.

FireMobile - Firebase Mobile Authentication Plugin

This is a WordPress plugin which enable mobile OTP/Two-Factor authorization in your site using firebase. On `BoroBazar` theme, you'll this plugin as a free bundle, and to use this plugin, you need some additional configuration.

To install this plugin follow up this procedure. Either,

```
wp-admin dashboard -> BoroBazar -> Plugins
```

or

```
wp-admin dashboard -> Appearance -> BoroBazar Required Plugins
```

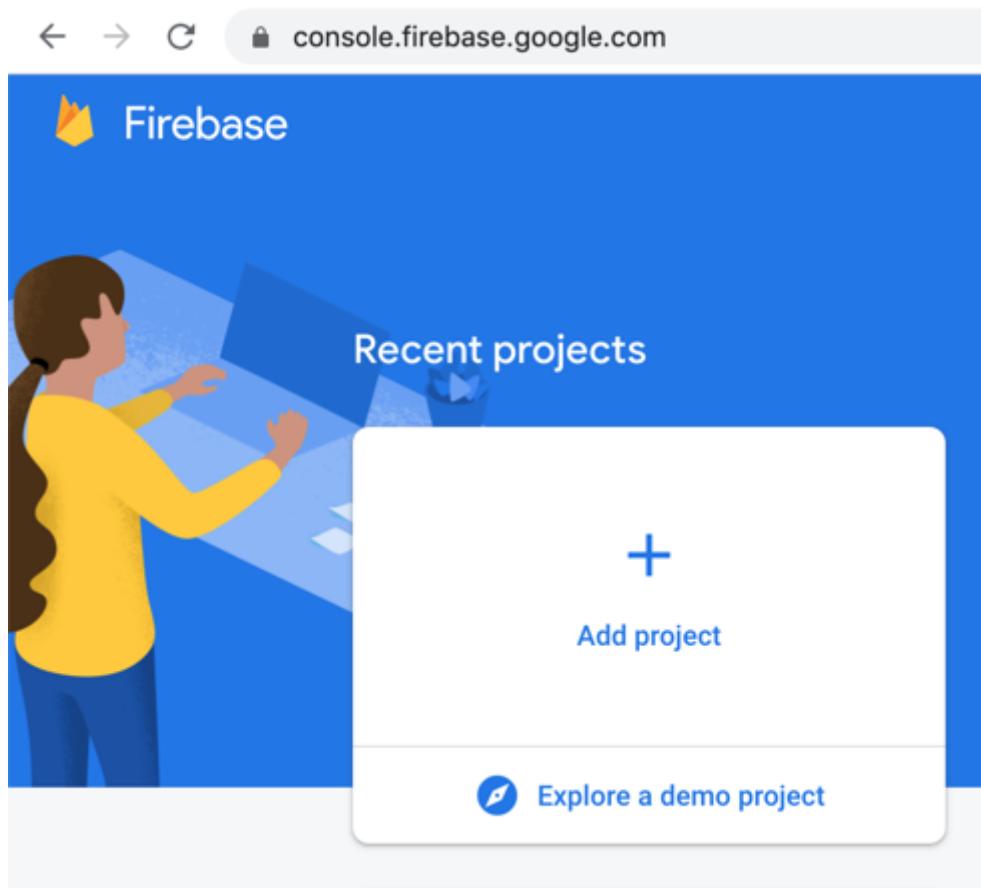

Why Firebase

Firebase provides Firebase's phone number sign-in request quota is high enough that most apps won't be affected. However, if you need to sign in a very high volume of users with phone authentication, you might need to upgrade your pricing plan. See the [pricing](#) page.

Quick Start

Instructions :

- If you do not have an Firebase project, you can create one from here [link](https://console.firebase.google.com)

- Now go to your Firebase Project [overview](#)-> [Project settings](#) and copy paste firebase configuration in below fields one by one

A screenshot of the Firebase Project Overview page. The URL in the browser is 'console.firebaseio.google.com/project/headless-412c5/settings/general/web:MjY0YTU4NWU1'. The page has a dark header with the 'Firebase' logo and a dropdown menu showing 'headless'. The main navigation bar includes 'Project Overview' (selected), 'Authentication', 'Database', 'Develop', 'Messaging', 'Integrations', and 'Service accounts'. On the left, there is a sidebar with 'Develop' selected, showing 'Authentication' and 'Database'. A dropdown menu is open over the 'Project settings' link in the navigation bar, listing 'Project settings', 'Users and permissions', and 'Usage and billing'. The main content area shows 'Your project'.

```
<script>
  // Your web app's Firebase configuration
  var firebaseConfig = {
    apiKey: "AIzaSyDeYaz",
    authDomain: "headless-",
    databaseURL: "https://",
    projectId: "headless-",
    storageBucket: "headless-",
    messagingSenderId: '',
    appId: "1:7936536284",
    measurementId: "G-8"
  };
  // Initialize Firebase
  firebase.initializeApp();
  firebase.analytics();
</script>
```

Api Key (apiKey)

Auth Domain (authDomain)

Database URL (databaseURL)

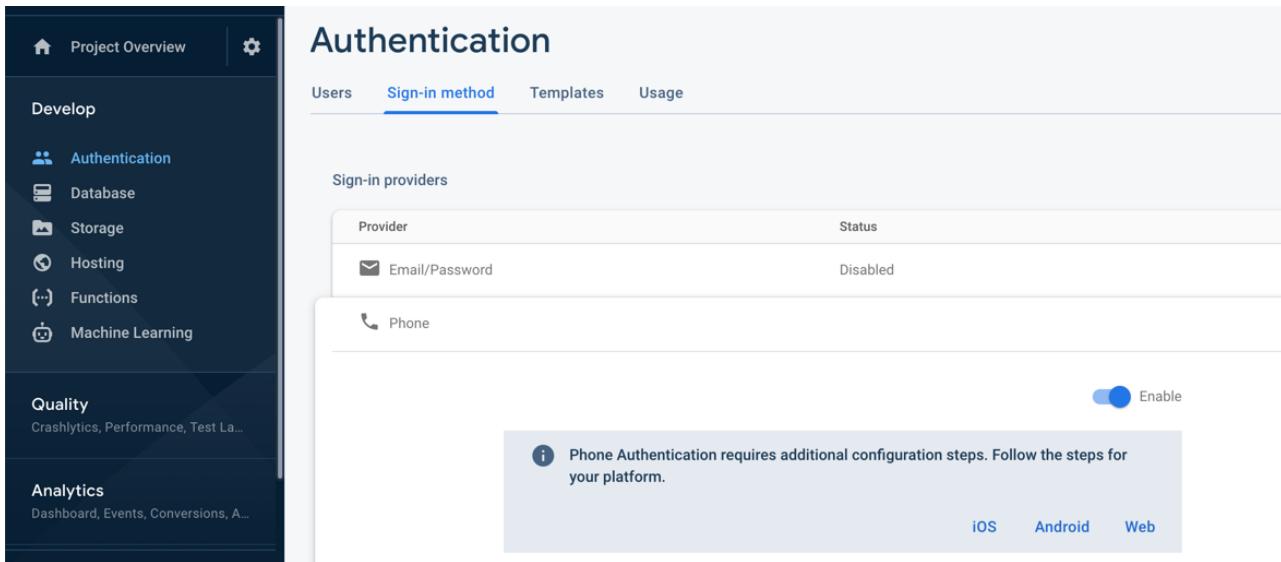

Project Id (projectId)

Storage Bucket (storageBucket)

Messaging Sender Id (messagingSenderId)

App Id (appId)

- In the Firebase console, open the Authentication section.

Project Overview

Develop

- Authentication
- Database
- Storage

- Machine Learning

Quality

Analytics

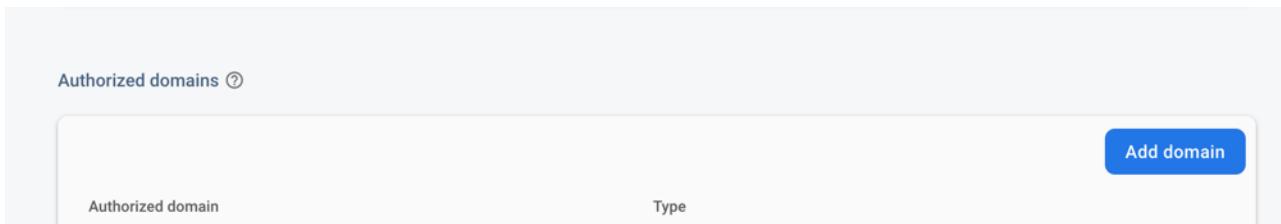

Sign-in providers

Provider	Status
Email/Password	Disabled
Phone	<input checked="" type="checkbox"/> Enable

Phone Authentication requires additional configuration steps. Follow the steps for your platform.

iOS Android Web

- On the Sign-in Method page, enable the Phone Number sign-in method.
- On the same page, if the domain that will host your app isn't listed in the OAuth redirect domains section, add your domain.

Authorized domains [?](#)

Authorized domain	Type

Add domain

If your domain is accessed by both `www` and without `www`, then make sure you add both `www` domain and without `www` on the authorized domain section.

- Copy this shortcode `[firebase_otp_login]` and add it to any place on your site you like.
- That's it, You should be able to use mobile login in your WordPress and WooCommerce site.

Shortcode

`[firebase_otp_login]`

just copy the above shortcode and put it into any page

[/] Shortcode

```
[firebase_otp_login]
```

You can also place it into the code,

```
<?php echo do_shortcode(' [firebase_otp_login]'); ?>
```

Shortcode Parameter

1. 'phone_button_text' => default value 'Send Code'
2. 'code_button_text' => default value 'Verify & Login',
3. 'phone_toggle_button_text' => default value 'Continue with Phone',
4. 'recaptcha' => default value 'invisible', // invisible or normal

you can change the above default value by using the shortcode in below format

```
[firebase_otp_login phone_button_text="Send me Code"  
code_button_text="Verify Code" phone_toggle_button_text="Login with  
Phone" recaptch="normal"]
```

Recaptcha

you can either show or hide recaptcha using `invisible` or `normal` option in the above shortcode. Recaptcha is must for firebase login.

Customization

You can use css code to customize the color, font-size etc.

if you want to work on the code then check the below file

php and html code for the shortcode can be found in

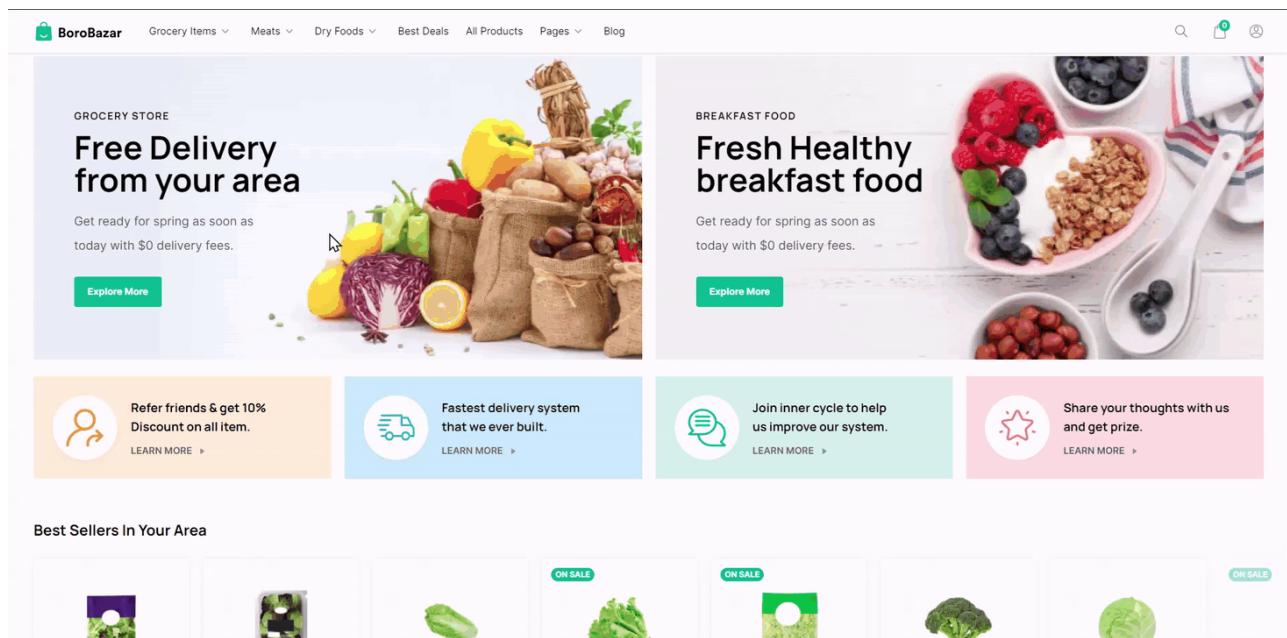

`Shortcodes/FirebaseOTPLogin.php` file. In this file you can change the html structure or any tag but be **careful** changing id or structure might cause the plugin to lose it's functionality.

We recommend to override design from the theme using css code. this way you can receive future update easily.

RedQ WooCommerce Quick View Plugin

This is a WordPress plugin which enable a pop-up view for WooCommerce variable & grouped product in the BoroBazar theme product grid. On `BoroBazar` theme, you'll this plugin as a free bundle, and to use this plugin, you need some additional configuration.

Targeted view

The screenshot shows a website header with a shopping cart icon and the text 'BoroBazar'. Below the header, there are two main promotional sections:

- GROCERY STORE**: Features a large image of various fruits and vegetables. Text: 'Free Delivery from your area'. Subtext: 'Get ready for spring as soon as today with \$0 delivery fees.' Call-to-action: 'Explore More'.
- BREAKFAST FOOD**: Features an image of a healthy breakfast spread with cereals, fruits, and yogurt. Text: 'Fresh Healthy breakfast food'. Subtext: 'Get ready for spring as soon as today with \$0 delivery fees.' Call-to-action: 'Explore More'.

Below these sections are four call-to-action boxes:

- Refer friends & get 10% Discount on all item.** (Icon: person with a circle)
- Fastest delivery system that we ever built.** (Icon: delivery truck)
- Join inner cycle to help us improve our system.** (Icon: speech bubble)
- Share your thoughts with us and get prize.** (Icon: star)

At the bottom, there is a section titled 'Best Sellers In Your Area' showing thumbnail images of various vegetables.

Installation & Usage

To install this plugin go either,

```
wp-admin dashboard -> BoroBazar -> Plugins
```

or

```
wp-admin dashboard -> Appearance -> BoroBazar Required Plugins
```

After installation process follow up this steps to activate the functionalities in the theme. Either go to this link [Quick View Configuration](#) or follow the below steps.

- Go to `Appearance -> Customize -> WooCommerce General -> Quick view`
- If it's not enabled then select enable from the dropdown and publish the changes.

Why RedQ WooCommerce Quick View Plugin?

This plugin provides `variable` & `grouped` products a flexible functionalities inside the grids used throughout the site. After installing and activating the plugin it will give product overview option in pop-up format where users can choose the variations & buy the products without navigating to the product-single page.

Note : This plugin won't work on `simple` product type.

Customization

Hello good people. We always encourages you to use BoroBazar-child theme for any modification.

How to modify Grid data?

In this chapter we will discuss how to inject custom data into product card. At first we have to understand that product card `Alpine` is built on two rendering types.

- **PHP rendered template** [inside shop page grid, product single page, related products, up-sell, cross-sell grid etc.]
- **JavaScript rendered template** [inside the Gutengerg blocks, e.g. `search result` block.]

Below discussion is about how to inject custom data inside the **JavaScript rendered template**

In general `Alpine` grid generally needs this data to build & display a product card.

- Product title
- Product price
- Product image
- Product sale informations
- Product unit

Suppose we have situation to insert `product sku` data inside the grid.

Inject Custom Data

As "Data" inside the JavaScripts template needs to be provided via PHP, so there are helper functions to accomplish that.

File location: `wp-content > plugins > borobazar-helper > includes > GridDataBuilder.php`

Please go to that file and observe the override functions. In that function it returns an array of data.

And those data will be available inside JavaScripts grid.

```

1 You, 3 weeks ago | 2 authors (You and others)
2 <?php
3
4 namespace BoroBazarHelper\Front;
5
6 use BoroBazarHelper\Traits\LangTrait;
7 use WP_Post;
8
9 You, 3 weeks ago | 2 authors (You and others)
10 class GridDataBuilder
11 {
12     use LangTrait;
13
14     public function __construct()
15     {
16         add_filter('allowed_meta', [$this, 'allowedMeta'], 1);
17         add_filter('borobazar_process_grid_data', [$this, 'override'], 1);
18     }
19
20     /**
21      * Modify post data.
22      *
23      * @return array
24      */
25     public function override(WP_Post $post)
26     {
27         if (class_exists('SitePress')) {
28             $processedData = $this->prepare_wpml_data($post->ID);
29         }
30
31         $metaData = $productGalleryImageLink = [];
32
33         $product = wc_get_product($post->ID);
34         $tagObject = get_the_terms($post->ID, 'product_cat') ? get_the_terms($post->ID, 'product_cat') : [];
35         $tagObject = get_the_terms($post->ID, 'product_tag') ? get_the_terms($post->ID, 'product_tag') : [];
36         $productType = get_the_terms($post->ID, 'product_type') ? current(get_the_terms($post->ID, 'product_type'))->slug : '';
37         $isOnSale = $product->is_on_sale();
38         $isInStock = $product->is_in_stock();
39         $productUnitLabel = get_post_meta($post->ID, '_borobazar_woocommerce_product_unit_label') ? current(get_post_meta($post->ID, '_borobazar_woocommerce_product_unit_label')) : '';
40         $productUnit = get_post_meta($post->ID, '_borobazar_woocommerce_product_unit') ? current(get_post_meta($post->ID, '_borobazar_woocommerce_product_unit')) : '';
41         $productVisibility = !empty($product) ? $product->get_catalog_visibility() : '';
42
43         $galleryAttachmentIDs = $product->get_gallery_image_ids();
44         foreach ($galleryAttachmentIDs as $galleryAttachmentID) {
45             $productGalleryImageLink[] = wp_get_attachment_url($galleryAttachmentID);
46         }
47     }
48
49     $gridAttachmentIDs = $product->get_gallery_image_ids();
50     foreach ($gridAttachmentIDs as $gridAttachmentID) {
51         $productGalleryImageLink[] = wp_get_attachment_url($gridAttachmentID);
52     }
53 }

```

Display Custom Data

This step is about displaying that SKU data inside the `Alpine` grid. JavaScript grid template grid is built underscore templating style. The code is located inside

```
wp-content > plugins > borobazar-helper > templates > grid > grid_alpine.php.
```

For `WPML` support a grid template file is available in that same folder.

In that `GridDataBuilder.php` file there is a function named `allowedMeta`, which already accepts some pre-defined meta data. Though any custom data is needed but unavailable in the `allowedMeta` function, then it also can be added by above procedure.

How to add custom taxonomy in Product post type ?

Special note

You need to download and install `RedQ Reuse Form` plugin to enable this feature. You can download this plugin from `WordPress dashboard > BoroBazar > Plugins` area.

In this chapter we will discuss how to inject custom taxonomy in Product post type. Current there are three custom taxonomies along with WooCommerce provided taxonomies. And all of them are `rest-api` enabled by default.

- Product genre [identifier: borobazar_product_genre]
- Product brand [identifier: borobazar_product_brands]
- Product price range [identifier: borobazar_product_price_ranges]

Step: 01

If you want to add more taxonomies under Product tab then there are filter hooks available. Please follow up this below code example. Here `Rental` is the registered new type.

```
add_filter('borobazar_custom_taxonomy_list', 'add_new_taxonomy',
10, 1);

function add_new_taxonomy($args)
{
    $args[] = [
        'name'      => 'rental',
        'showName'  => esc_html__('Rental', 'borobazar-helper'),
        'postType'   => 'product',
        'hierarchy' => true
    ];
    return $args;
}
```

Step: 02

Then you need to enable it for WordPress rest-api by following the below code.

```
add_filter('borobazar_rest_supported_taxonomies',
'borobazar_enable_rest_api_custom_taxonomy', 10, 1);

function borobazar_enable_rest_api_custom_taxonomy($args)
{
    $args[] = 'rental';
    return $args;
}
```

How to add custom termmeta in Product taxonomies ?

Special note

You need to download and install `RedQ Reuse Form` plugin to enable this feature. You can download this plugin from `WordPress dashboard > BoroBazar > Plugins` area.

In BoroBazar theme we have provided a filter hook to add term meta on the taxonomies under Product post type. For now, there is a predefined term meta option. That is adding thumbnail image options for each taxonomy.

Use case: In product search page you might need taxonomy thumbnail image. That's why a predefined thumbnail option is already built inside the code. All you need is to enlist that taxonomy in the filter hook.

```
add_filter('borobazar_add_term_meta_to_taxonomies',
'add_thumbnail_option_to_below_taxonomies', 10, 1);

function add_thumbnail_option_to_below_taxonomies($args){
$args[] = 'rental';
return $args;
}
```

Child Theme

In the Envato theme package you will get a file named `borobazar-child.zip`.

Upload this zip as a theme and activate it. Make sure you have already `BoroBazar` theme installed.

Special Note : If you want to perform any modification/customization for your needs, please use child theme always. Then it will not make any hamper with the frequent theme update.

Breaking changes

Dear valued customer. In this chapter we will enlist all the breaking changes that are going to be introduced in version releases. Also all the breaking changes of theme version will be listed here. So, please do not skip and check this chapter each time when the theme gets updated.

v1.2

Added theme settings to remove out of stock product from search page.

In BoroBazar customize panel there was an option added to select either bring out of stock product in the search or not. You can find this settings under `woocommerce` `General` options.

Added custom taxonomy support on search page => Extended search block & Quick search block.

In BoroBazar theme there are two search blocks were introduced. On initial releases those blocks had only `product category` presented for primary search parameter. But from now on user can build custom taxonomy under `Product` post type and choose it as primary search parameter into search block.

Added custom taxonomy builder support.

In BoroBazar theme we have added a new feature to build custom taxonomy. You can find this feature under `Product` post type. For more details please check in the `Customization` chapter.

FAQs

In this chapter we will discuss some basic but important FAQs. This may be helpful to use BoroBazar theme more effectively.

How to know when a theme update is available?

After releasing each version of BoroBazar, we will always update the information in envato item description page, landing page and changelog.

How to use child theme?

In the theme package you should get a file named `borobazar-child.zip`. Upload this zip as theme and activate it. Make sure you have already BoroBazar installed. Both child and main theme must have to be installed but child theme have to be activated.

How to change menu static URL into current site URL?

After importing demo contents please follow up this steps must.

- Go to `Appearance->Menus` page in WordPress dashboard.
- Check all the menu links. As some of the menu items are created with `custom-link`, you need to remove the BoroBazar demo site URL & set your site's URL.

How to optimize my site?

To optimize your site you can use below two free plugin. You can also configure CDN and for object caching you can also use `Redis` if your server support it.

- <https://wordpress.org/plugins/wp-super-cache/>
- <https://wordpress.org/plugins/autoptimize/>

You can use any other caching plugin.

After deactivating and reactivating the theme my site is broken nothing is showing properly. How to fix?

make sure `BoroBazar Theme Helper` and `Gridster` plugins are activated. If not please activate these plugins. These two plugin got deactivated when BoroBazar theme was switched or removed or deactivated.

Google Map doesn't work on my contact page?

To use google map on any page, you've to add google map key first. At first, generate a google map key from google console, and after that, insert that key on the wp-admin google maps admin panel.

How to use product quick view plugin in the product grid?

You need to install & activate the `RedQ WooCommerce Quick View` plugin first. Then set the product quick view option to `Enable` in the theme options. Follow this link for more help. [Global Search Settings](#)

Why all the images are blur after I import demo XML?

We do not have permission to redistribute images used in demo site. So, either we have to blur or faded all images from demo XML.

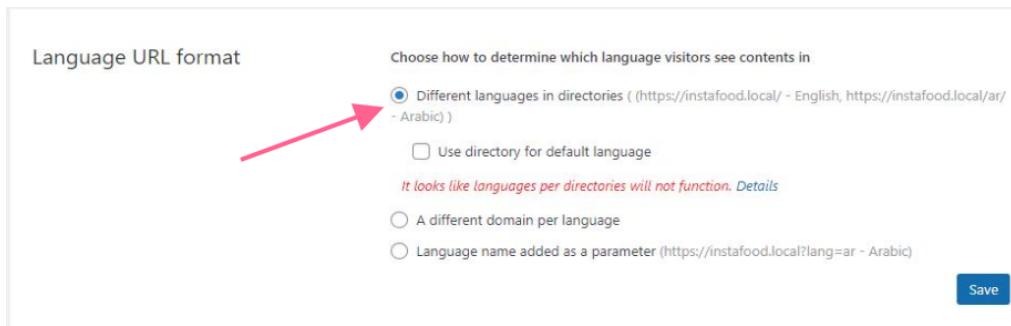

How can I convert my site into RTL format?

If your site is not multi-lingual but in RTL format only, then change the language settings from `wp-admin > settings > general > Site Language`. The theme is RTL supported, so it will automatically change the formatting.

How can I make my site WPML compatibility?

To make site WPML compatible, you need to follow below steps.

- Install WPML plugin along with `WooCommerce Multilingual`, `WPML Media`, `WPML String Translation`, `WPML Translation Management`.
- Go to WPML -> Languages options.
- Select sub-directory based settings.

Language URL format

Choose how to determine which language visitors see contents in

Different languages in directories ((https://instafood.local/ - English, https://instafood.local/ar/ - Arabic))

Use directory for default language

It looks like languages per directories will not function. Details

A different domain per language

Language name added as a parameter (https://instafood.local?lang=ar - Arabic)

Save

- Select `Language filtering for AJAX operations` and save.

Language filtering for AJAX operations

Store a language cookie to support language filtering for AJAX ?

Save

- Translate all the media files.
- Translate all the categories, products, pages, menus, widgets, etc.

- Select & set search page in the `Kirki customize options -> General -> Enable global search`. It will automatically grab and redirect all the translated search page IDs in different language.
- Translate the BoroBazar theme and all the related plugins.

Changelogs

v1.2

- Custom taxonomies based search feature on extended search block [New]
- Custom taxonomies & termmeta adding facilitates. [New]
- Search page result modification settings [New]
- CSS issue fixed.
- Language .pot file update

v1.1

- New Demo introduced [Trendy]
- Dynamic Product Taxonomy search feature
- Multiple new Gutenberg Blocks
- 2 new product card layout.
- 1 new category card layout
- Language issue fixed
- CSS issue fixed
- WooCommerce latest version compatibility check
- Page sidebar issue fixed

v1.0.1

- Tested with latest WordPress v5.9 & WooCommerce
- Added support for latest Kirki Customizer Framework upto v4.0.20
- WPML compatibility added
- Nextend Social Login compatibility added =>
<https://wordpress.org/plugins/nextend-facebook-connect/>
- RTL demo added => <https://borobazar.redq.io/borobazar-rtl/>
- New WooCommerce shop page widget area added
- Breadcrumb issue fixed on custom taxonomy
- Borobazar helper plugin language file update

v1.0

- initial release.

Thank You
